El Mahdi MOUBARAK

I ship software & AI products to production
Greater Paris Metropolitan Region

Summary

I build software and AI systems end-to-end. Specs, architecture, code, deploy. 6 years across cybersecurity, healthcare and fintech, mostly as the only engineer on the project. I work with founders and agencies. If you need something shipped, get in touch.

Experience

EMM

Founder & Software Engineer
March 2026 - Present (5 months)
France

Independent software engineer. I build web apps, SaaS and AI automation for founders and agencies, end to end.

Piktechs

Founder
March 2026 - Present (5 months)
France

B2B suite for events and networking: digital business cards, lead capture, attendee tracking. I design, build and run the whole product.

KSUR Services

CTO
March 2026 - Present (5 months)

- ✓ Own the agency's full technical stack and delivery, from architecture to production.
- ✓ Design and build tailored web and mobile applications from the ground up.
- ✓ Architect and deploy AI-powered automation workflows to streamline internal and client operations.

DRIVECO

AI Trainer
July 2026 - July 2026 (1 month)
Paris

Designed and delivered two tailored AI training sessions (FR/EN), with live hands-on use cases built on the company's real workflows.

Board of Cyber

Full-Stack Engineer

March 2023 - February 2026 (3 years)

Paris

Core contributor to the continuous development of Security Rating®, a SaaS platform for automated cyber posture assessment used by 200+ organizations. Worked across the Security Rating platform, back office and manager office in an agile, fast-release environment.

Stack: Angular, TypeScript, Python, AngularJS, Grav CMS, Docker, CI/CD

- ✓ Delivered features and bug fixes continuously across the platform frontend, maintaining a high-cadence release cycle without compromising stability.
- ✓ Implemented test coverage with Spectator and optimized CI/CD pipelines to ensure regression-free deployments.
- ✓ Engineered a Python-based nmap port vulnerability scanning probe, automating the collection of external attack surface data.
- ✓ Contributed to Angular migration and major library upgrades, reducing technical debt incrementally across releases.

ALTAO - RECHERCHE DEVELOPPEMENT MARKETING SANTE

Full-Stack Engineer

September 2021 - September 2022 (1 year 1 month)

Lille

Sole engineer on a greenfield medical platform built to streamline the correction of hospital discharge summaries, replacing a fragmented multi-tool legacy workflow with a single production system.

Stack: Vue.js, Django, PostgreSQL, AWS (EC2, Route53, Amplify)

- ✓ Owned the full product lifecycle end-to-end: ran requirement sessions directly with doctors and consultants, wrote technical specs, designed screens, and translated medical domain constraints into architecture decisions.
- ✓ Built and shipped the core platform from scratch, integrating ML prediction algorithms and rule engines delivered by the Data Science team.
- ✓ Configured and deployed the entire AWS infrastructure autonomously (EC2, Route53, Amplify), including production monitoring.

Impact: Unified the full auditing production chain into a single portal, significantly accelerating the correction workflow for medical teams.

Deuspi

Mobile Software Engineer

March 2021 - June 2021 (4 months)

Lille, Hauts-de-France, France

Sole mobile engineer on the first version of a React Native grocery delivery app, transitioning the product from web-only to native mobile.

Stack: React Native, JavaScript

- ✓ Owned the entire frontend implementation from scratch, translating designer wireframes into a production-ready mobile interface.
- ✓ Implemented a gamified UX direction defined by the product team to drive customer retention.
- ✓ Co-defined API contracts and integration with the backend developer, ensuring real-time order tracking and inventory sync.

Worldline

Full-Stack Engineer

April 2019 - August 2019 (5 months)

Seclin

Sole engineer on an internal R&D tooling project to eliminate manual debugging of MQTT-based interactive payment demos.

Stack: Vue.js, Spring Boot, Java Android, Docker, MQTT

- ✓ Designed and built a centralized dashboard from scratch, architecting the MQTT broker integration and automating the creation, storage and replay of complex payment test sets.
- ✓ Directly reduced debugging time for business and engineering teams by replacing ad-hoc manual request crafting with a standardized internal portal.

Education

IMT Nord Europe

Master's Degree in Engineering, Computer Science · (2017 - 2022)
